## 7 Meta Theory

### Static Meta Theory

**Theorem 1** (Confluence). *If  $m \rightsquigarrow^* m_1$  and  $m \rightsquigarrow^* m_2$ , then there exists  $n$  such that  $m_1 \rightsquigarrow^* n$  and  $m_2 \rightsquigarrow^* n$ .*

**Theorem 2** (Conversion). *Conversion  $\simeq$  is an equivalence relation.*

**Theorem 3** (Static Validity). *For any static typing  $\Gamma \vdash m : A$ , there exists sort  $s$  such that  $\Gamma \vdash A : s$  is derivable.*

**Theorem 4** (Sort Uniqueness). *If there are static typings  $\Gamma \vdash A : s$  and  $\Gamma \vdash A : t$ , then  $s = t$ .*

**Theorem 5** (Static Subject Reduction). *For any static typing  $\Gamma \vdash m : A$  and static reduction  $m \rightsquigarrow n$ , then  $\Gamma \vdash n : A$  is derivable.*

**Theorem 6** (Static Normalization). *For  $m$  with static typing  $\Gamma \vdash m : A$ , it is strongly normalizing.*

### Dynamic Meta Theory

**Theorem 7** (Dynamic Reflection). *For any dynamic typing  $\Gamma; \Delta \vdash m : A$ , static typing  $\Gamma \vdash m : A$  is derivable.*

**Theorem 8** (Value Stability). *For any value  $v$  with dynamic typing  $\Gamma; \Delta \vdash v : A$  and  $\Gamma \vdash A : s$ , then  $\Delta \triangleright s$ .*

**Theorem 9** (Dynamic Subject Reduction). *For any dynamic typing  $\Gamma; \Delta \vdash m : A$  and dynamic reduction  $m \rightsquigarrow n$ , then  $\Gamma; \Delta \vdash n : A$  is derivable.*

**Theorem 10** (Dynamic Progress). *For any dynamic typing  $\epsilon; \epsilon \vdash m : A$ , then  $m$  is a value or there exists  $n$  such that  $m \rightsquigarrow n$ .*

### Erasure-Dynamic Meta Theory

**Theorem 11** (Erasure Existence). *For any dynamic typing  $\Gamma; \Delta \vdash m : A$ , there exists  $m'$  such that erasure relation  $\Gamma; \Delta \vdash m \sim m' : A$  is derivable.*

**Theorem 12** (Erasure Subject Reduction). *For any erasure relation  $\Gamma; \Delta \vdash m \sim m' : A$  and dynamic reduction  $m' \rightsquigarrow n'$ , there exists  $n$  such that the following diagram commutes.*

$$\begin{array}{ccc} \Gamma; \Delta \vdash m & \sim & m' : A \\ \Downarrow & & \Downarrow \\ \Gamma; \Delta \vdash n & \sim & n' : A \end{array}$$

**Theorem 13** (Erasure Progress). *For any erasure relation  $\epsilon; \epsilon \vdash m \sim m' : A$ , then  $m'$  is a value or there exists  $n'$  such that  $m' \rightsquigarrow n'$ .*
